Shaahid Ahammad Shaik **Email: shaahid.shaik@gmail.com**
Santa Clara California 95051 **Mobile: +1-209-319-6213**

Principal Software Engineer with 16+ years of experience in cloud-native security, distributed systems, network security, automation, and AI-enabled infrastructure. Extensive expertise in AWS, Kubernetes, microservices, Python automation, performance engineering, and enterprise security platforms.

Core competencies:

- 16+years' experience in Network Security domain with In-depth knowledge of L3, L4, L7 protocols, Firewall concepts, packet analysis, Routing Protocols, SSL Forward Proxy and IPSec VPN.
- 8+ years of experience in Micro services, SDN-WAN, Virtualization & Cloud, CASB products.
- Software test planning, understand the customer requirements and develop test cases.
- Automation framework (CLI/GUI/REST API) development based on the feature set.
- System, Scale & Performance testing of a product before it can be released to customers.
- Knowledge on Big Data Security Analytics, Malware analysis using sand boxing, and signature-based identification of threats.
- Proven communication skills and the ability to troubleshoot and solve complex issues.
- Design, deploy and maintain the on-prem cloud infrastructure and production support.
- Integration & Inter-op testing of various networking components.

Certifications:

- AMD- ROCm Certfied Associate.
- Juniper Network Certified Internet Specialist. (JNCIS-SEC)- JPR135775

Key Skills:

- Integration & Inter-op testing of various networking components.
- Good Knowledge on network security features which include SSL Proxy, NAT, IPsec VPN IKEv1/v2, logical systems, Application layer gateways, DoS attacks & Micro segmentation.
- Knowledge on Converged Infrastructure, Kubernetes, Open vSwitch, OpenNebula, GlusterFS, Big Data Analytics, ETCD, PostgreSQL DB, Prometheus, Grafana, Kafka, Load balancing and ETL.
- Worked on application layer protocols DNS, FTP, TELNET, HTTP/S, FTP, and DHCP.
- Knowledge on TCP/IP Protocol stack, GRE, NSRP, JSRP, Routing protocols (RIP, OSPF, BGP), ARP. Experience in using AWS, VMware ESXi/WorkStation, Kubernetes/Docker Containers.
- Good understanding of network high availability using clustering, zero down time stateful failovers.
- Experience on working with Cisco IOS, Palo Alto devices, Unix, Linux internals, utilities- sed/awk, Netscreen and Juniper SRX/MX & Virtualization platforms.
- Worked on windows-based PKI servers, PowerShell, Active Directory, Wireshark, Linux based RADIUS, OpenLDAP servers, VMware, Hypervisor.
- Hands-on experience using Linux based traffic tools like Snort IDS, iptables, sendIP, hping2, fragrouter, and Strong Swan. Traffic generators – Ixia-Ixload, Agilent and Spirent.

Programming Languages	: PYTHON, PERL, SHELL
Deployment and Automation tools	: Ansible, Jenkins, Selenium, Pytest/Robot.

Professional Experience:

Hewlett Packard Enterprise, USA – Principal Software Engineer **Nov 2025 – Present**

- ✓ Lead solution-level validation and engineering initiatives for cloud-native security platforms deployed across AWS and Kubernetes environments.
- ✓ Architect and maintain Python-based automation frameworks supporting Security Director Cloud and enterprise security management solutions.
- ✓ Define validation strategies and quality objectives for distributed systems and microservices-based applications.
- ✓ Lead validation efforts involving Aruba ClearPass, identity-driven access control, authentication services, and cloud security technologies.

- ✓ Analyze software scalability, resiliency, reliability, and operational performance under large-scale production workloads.
- ✓ Design automation solutions for API validation, integration testing, end-to-end workflows, performance testing, and release qualification.
- ✓ Evaluate AI-assisted engineering tools and intelligent automation technologies to improve software quality and engineering productivity.
- ✓ Analyze telemetry, logs, metrics, and observability data to improve reliability and accelerate root cause analysis.
- ✓ Provide technical leadership and mentorship on cloud computing, Kubernetes, distributed systems, automation architecture, and software engineering best practices.
- ✓ Contribute to strategic initiatives involving AI-enabled infrastructure, cloud-native security platforms, and intelligent operations.

Juniper Networks Inc, USA – Software Engineer Staff **Jul 2022 – Oct 2025**

- ✓ Automated GUI, API, and end-to-end workflows using PyTest, Selenium, Requests, and REST API validation frameworks.
- ✓ Validated Kubernetes-based microservices deployed on AWS, VMware, and cloud-native environments.
- ✓ Executed functional, integration, regression, scalability, and performance testing for enterprise cloud security solutions.
- ✓ Monitored production platforms using Kibana, Grafana, ELK Stack, and operational monitoring tools.
- ✓ Developed automated test suites integrated with Jenkins-based CI/CD pipelines.
- ✓ Performed root cause analysis using logs, telemetry data, and operational metrics.
- ✓ Collaborated with software engineering, DevOps, cloud infrastructure, and product management teams throughout the development lifecycle.
- ✓ Conducted customer-focused validation and interoperability testing of security and networking solutions.
- ✓ Supported release readiness, deployment qualification, and production validation activities.

Novateur Technologies, Tracy, USA. - Automation Engineer **Apr 2022 – Jul 2022**

- ✓ Automation framework development on a cloud based cloning product.
- ✓ Write automated scripts in Python which can validate the Oracle DB cloning software.
- ✓ Automate the GUI workflows using Selenium and incorporate scripts as part of CI/CD pipeline.

Netskope, Bangalore. - MTS 4 **Feb 2020 – Apr 2022**

- ✓ New feature enhancements on Netskope CASB products, automate the test cases related to Inline Policies, Netskope Gateway and SSL Proxy.
- ✓ New node deployment and validation on production environment and migration of the resources.
- ✓ Support and add new modules to Pylark-, a Pytest based automation framework.

DELL-EMC, Bangalore. - Principal Software QA Engineer **Dec 2018 – Jan 2020**

- ✓ Perform integration and E-2-E testing of the system controller which is intended for data centers on Next Gen Converged Infrastructure, VPC setup and automation.
- ✓ Automation of test cases using PyTest Automation framework.
- ✓ As a Technical Lead of the squad, mentor the team and resolve various technical issues.

ColorTokens, Bangalore. - Senior QE **Aug 2017- Dec 2018**

- ✓ Developed automation framework by using vSphere API for CTAgent & Secure Remote access feature on Linux and Windows platforms.
- ✓ Understand the customer deployments and develop the test plan accordingly.
- ✓ Perform End-To-End testing of CT components on AWS/ESXi as part of the release-test team. Engage in feature testing whenever required and automate the test cases.

Juniper Networks, Bangalore. - MTS 3 [**May 2015–Aug 2017, Aug 2010–Mar 2014]**

- ✓ System testing for IPSec VPN feature improvements on the Juniper MX routers. Understand the customer deployments and develop the test plan accordingly.
- ✓ Test interoperability with Cisco IOS and Palo Alto devices, perform integration testing.
- ✓ Work on the issues reported at customer deployment and produce the root cause corrective analysis. Document the workflow, customer configuration and issues reported.
- ✓ Work on the test framework migration from PERL to PYTHON.
- ✓ Perform regression tests on Security features like IPSec VPN, IKEv2, NAT, IDS, Dual Stack, Stateful packet inspection in both standalone and High Availability.
- ✓ Script optimization, Manual & Automation testing on firewalls using PERL. Root Cause corrective action on issues raised by customers.

Customer focused testing on the service releases for SRX devices.

Riverbed Technology, Bangalore. - MTS **Dec 2014 – Apr 2015**

- ✓ Working on WAN optimization technology of Riverbed Technology.
- ✓ Sprint Planning, new feature testing on SteelHead Mobile for desktop and mobile.
- ✓ Plan and develop test cases and build the optimized test environment required.

Narus Networks (a subsidiary of The Boeing Company). Software QA Engineer **June 2014 – Dec 2014**

- ✓ Use case development for AppScout(Mobile Apps) feature of Narus Big Data Security Analytics solution nSystem 3.0.
- ✓ Automate test cases for various features using PERL/SHELL scripts.
- ✓ System Integration with other vendor's devices like SNART, Palo Alto.
- ✓ Work closely with the development team in an agile environment for quick deliverables. Test data generation using live setups on the Internet to replicate the Big Data.

Projects:

Security Director Cloud [Jan 2024- Present]

- Validate various microservices hosted on Kubernetes cluster on Cloud(AWS) and On-prem.
- Test the chat bot AI-Agent designed for Security Director.

Secure Web Gateway [Jul 2022 – Jan 2024]:

- Monitor production issues tools such as Kibana, Grafana and in house customized tools for network operations. Automate test cases using Selenium, requests, boto3 python modules.
- Validating roaming user and on-prem user using Juniper SWG solution

CloneTab Gold [Apr 2022- July 2022]:

- Creating fully automated CI build and deployment infrastructure.
- Developing scripts for build, deployment, maintenance and related tasks using Jenkins, Docker, Python and Bash
- Experience of writing & managing Ansible Scripts & using Linux automated deployments.

DPPROXYLB: (F5 replacement):

- Perform end-to-end/scale testing of IPVS based load balancers.
- Monitor the customer traffic using tools like Grafana, Sumo logic and ELK.
- Automate test cases and write unit tests in Pytest.
- Production validation of the nodes deployed.

Netskope Gateway-DTLS:

- Feature testing of DTLS re-design and implementation on NSGW.
- Automate test cases using pylark.

Mercury 2.0:

- Perform system testing of the automation software delivered for converged systems management.
- Validate the automation of Day-0, Day-1/1+ services deployment of NGCI.
- Document the scale numbers achieved and help in publishing them to customers.

Kerbs, Norma , R1:

- Perform system testing of Kerbs/R1/R1.1 release of ColorTokens security solution.
- Test user experience of the product and report bugs accordingly.
- Test case development and execution for CT-Bridge (a VPN replacement solution) on AWS and ESXi.
- Develop automation framework and Integrate the scripts to Jenkins as part of CI/CD.
- Track the bugs reported, test progress until the project is delivered to the customer.

Common IPsec VPN:(MX/SRX)

- Responsible for Test plan design, development and execution.

- Integrate the IPsec VPN component with other services like NAT, Screens, ALG and validate the behavior.
- Validate IKE tunnel setup rate improvements on MX series Juniper routers.
- Make the necessary connections to the IXIA, configure the MX devices and bring UP the test setup.
- Automate the cases tested using the TOBY (PYTHON) framework and make a smooth transitionto the regression team.

Interop & FIPS:

- Working on customer specified testing which involves Interop tests with 3rd party vendor devices like Cisco ASR/ASA, Checkpoint, Palo Alto and StrongSwan VPN client and automation of test cases.
- Validating the crypto algorithms on Mx routers, which are supported under FIPS.

Gateway IP

- Develop a new feature test plan as per the customer deployment.
- Test and automate the GW_IP feature on Juniper MX platforms as per the test plan.
- Test the hmac-sha-256 algorithm support on the MX SPARKS card and automate the test cases.

Salina (Oracle Forms)

- Setup the Oracle DB and App server on Linux and deploy steelheads on either of the communication channels. Verify the traffic gets optimized with all the modes (Socket/HTTP/SSL)

Leo (nSystem 3.0)

- Develop and perform manual/automation tests on AppScout, Topic modeling, and Targeted capture, Security & Surveillance features on Narus nSystem product releases.

Environment: Windows 2000/XP/2007, Msoft-2003 PKI servers, UNIX shells, Red Hat/CentOS Linux, VMware, AWS, Active Directory, MySQL, Kubernetes, Postgres, Hypervisor, Oracle DB, CVS, GIT, Rancher, GitHub, Docker, Jenkins.

Education:

- ✓ M.S. in Computer Science & Artificial Intelligence, Boston University – Started Fall 2026 (in progress)
- ✓ Bachelor of technology in Electronics & Communication Engineering, JNTUH 2010 - 73%
- ✓ Higher Secondary, MPC, Board of Intermediate – 86.6%
- ✓ 10th SSC Board of Secondary Education – 85%

I solemnly confirm all the information provided above is true to the best of my knowledge and belief.

Shaahid Ahammad Shaik
